Googolplex Written Out

Wolfgang H. Nitsche

Stanford University

A large circular graphic composed of many small, stylized '0' characters, resembling a spiral or a large '0'. The '0's are arranged in a circular pattern, with some characters slightly offset to create a sense of depth or rotation. The overall effect is a dense, circular arrangement of the digit zero.

Foreword

In 1940, the mathematician Edward Kasner published the book "Mathematics and the Imagination", in which he popularized the words googol and googolplex which his nephew suggested as names for big numbers.

The number googol has been defined as 1 followed by a hundred zeros:

[illegible]

The much larger number googolplex has been defined as 1 followed by a googol zeros. While this number can easily be written as

$$\text{googolplex} = 10^{\text{googol}} = 10^{(10^{100})}$$

using the exponential notation, it has often been claimed that the number googolplex is so large that it can never be written out in full.

[illegible]
