

Googolplex Written Out

Wolfgang H. Nitsche

A graphic featuring a spiral pattern of numbers. The spiral starts with the word 'volume' in a bold, black, sans-serif font at the top left. It then curves around, composed of the digits 9, 7, 4, 3, and 6. The digits are arranged in a way that they follow the curve of the spiral, with '9' and '6' being the most frequent, followed by '7', '4', and '3'. The spiral is centered on a white background.

Googolplex Written Out

Wolfgang H. Nitsche

Stanford University

Foreword

In 1940, the mathematician Edward Kasner published the book "Mathematics and the Imagination", in which he popularized the words googol and googolplex which his nephew suggested as names for big numbers.

The number googol has been defined as 1 followed by a hundred zeros:

[illegible]

The much larger number googolplex has been defined as 1 followed by a googol zeros. While this number can easily be written as

$$\text{googolplex} = 10^{\text{googol}} = 10^{(10^{100})}$$

using the exponential notation, it has often been claimed that the number googolplex is so large that it can never be written out in full.

[illegible]
